**INFCIRC/908 International Practitioner
Workshop for Insider Threat Mitigation at
Nuclear & Radiological Facilities**

**Small Group Discussion - Continued
Trustworthiness Assurance**

INS International
Nuclear Security
Reducing Risk of Nuclear Terrorism

Objectives

1. Discussion on the processes that might be used for Continued Trustworthiness Assurance for your assigned facility type.
2. Discussion of INFCIRC 908 Focus Group Questions.
3. Brief readout to larger group of discussion results.

Continued Trustworthiness Assurance (Post-hire)

Additional measures may be applied for continuous (more frequent) evaluation of individuals working in positions affording access to certain materials, facilities, and information to ensure the highest standards of reliability as well as physical and mental suitability.

The purpose of this continuous evaluation is to identify in a timely manner individuals whose judgment may be impaired or other circumstance that may represent a reliability, safety, and/or security concern.

- Considering the threat, regulations, material flow, activities with nuclear or radioactive material, and facility type, select measures or programs that would help assure the continued trustworthiness of current employees.
- The INS Insider Threat Mitigation Program Facility Implementation Handbook can be used as a reference for measures
- Please use the exercise worksheet handout to capture your discussions on the measures selected providing as much of the requested information as possible
- A moderator will work with each small group to provide answers to any questions needed to help with the discussion
- Select a spokesperson and be prepared to provide the larger group with information on the measures your group selected
